

Data Sheet

All Weather Roofing Compound

Description:

All Weather Roofing Compound is a heavy duty, solvent based bituminous roof coating, compounded with fillers and fibres. It is of a brushable consistency.

Uses:

All Weather Roofing Compound is an effective, general purpose roof coating. It is resistant to wash off by rain almost immediately after application and is therefore particularly suited to winter use. All Weather Roofing Compound may be applied by brush or spray to waterproof and reseal many different types of roof covering, including:

- Asphalt roofs
- Concrete roof decks
- Slates & Tiles
- Built-up felt roofs
- Asbestos cement sheeting
- Metal sheeting, including iron, steel, zinc & lead

Advantages:

- Easy to apply - Brushable consistency or with spray equipment
- Effective - Good waterproofing properties
- Durability - Tough, fibre reinforced for strength

Technical Data:

Appearance:	Black or Silver
Specific Gravity:	0.97
Solids Content:	55%
Flash Point:	40°C
Application Thickness:	200-400 microns (2/3 coats)
Service Temperature:	-10 to +75°C
Fire Rating BS476 Part 3	External AA
